PERSONAL PROJECTS

E-commerce website (backend)

- A Django project was built as a part of a school project which has a database on SQL and has various Conditional pages with a Google Authenticator to log in to the Website.

Spotify clone(backend)

- A Django project which uses the Spotify API to retrieve data and play songs and make playlists which are exclusive to individual users. Has a Google Authenticator to ease out the login.

Bidding system(backend)

- A website developed for students of BITS Pilani to easily buy and sell used items with their peers.

IPL Betting Game (Solidity - smart contract)

- Done as a part of a college project where the deployer of the contract gets a commission and the users place a bet on either teams of an IPL match. Placing a bet after the results are announced is not allowed and the prize pool is distributed among the winners.

Multi Sig Wallet (Solidity - smart contract)

- A smart contract which is live on the RinkeBy TestNet where the authorised Signatories are administered by the contract deployer and 3/4ths of the signatories need to approve a transaction

Taken Creation with Open Zeppelin

- Created a token of my own and the token is distributed among 10 addresses over a period of 3 years.
